-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franca in view of Birang et al.

Franca teaches measuring the height of a polishing pad and increasing a rotational speed of the dresser if the surface of the polishing cloth is higher at an inner circumferential region of the polishing pad than at an outer circumferential region, lowering the rotational speed of the dresser if the surface of the polishing cloth is higher at an outer circumferential region than at the inner region, increasing a ratio of the rotational speed of the turntable to a rotational speed of the dresser if the surface of the polishing cloth is higher at an inner circumferential region of the polishing pad than at an outer circumferential region and lowering a ratio of the rotational speed of the turntable to a rotational speed of the dresser if the surface of the polishing cloth is higher at an outer circumferential region than at the inner region, (col. 5, lines 21-63). Franca teaches all the limitations of the claims except for measuring the height of a surface of the polishing cloth at radial positions of the polishing cloth in a radial direction thereof. Birang teaches measuring the height of a surface of the

polishing cloth at radial positions of the polishing cloth in a radial direction thereof, (col. 11, lines 45-50). It would have been obvious to one having ordinary skill in the art at the time the invention was made, to measure the height of the surface area at radial positions of the polishing cloth, as taught by Birang, in order to enhance the measuring efficiency.
